Sales Engineer Candidate · Electrical Engineering & Software · Customer-Focused Technical Solutions

Los Angeles, CA · douglasseo.business@gmail.com · 707.953.9522 · linkedin.com/in/douglas-seo-337133186 · github.com/seoking23 · douglasseo.com

PROFESSIONAL SUMMARY

UC Berkeley EECS graduate (top 5% AI/ML) with hands-on hardware test experience in ultrasonic sensor systems and 4+ years building and personally selling technical products directly to business customers. Combines deep technical fluency — hardware-software integration, signal processing, and full-stack systems architecture — with a track record of getting close to customer pain points, translating them into working solutions, and building lasting client relationships: growing combined client bases to 160+ business customers across two founder-led ventures at sub-5% monthly churn. Based in Los Angeles and seeking to bring this technical-plus-customer-facing foundation to an entry-level Sales Engineer role at Keysight Technologies, helping customers solve real-world measurement and engineering challenges.

EDUCATION

B.S. Electrical Engineering & Computer Science

August 2022

University of California, Berkeley · Top 5% in CS 188/189 (AI & Machine Learning) with Professor Recognition

Relevant Coursework: Circuits & Signal Processing · Data Structures & Algorithms · Machine Learning · Distributed Systems · Cybersecurity · Web Development

HONORS & AWARDS

- ▶ **Salutatorian, Centennial High School** (Corona, CA) — graduated 2nd of 800 students, 4.83 GPA
- ▶ **FBLA Business Presentations** — 2nd Place Nationally, National Leadership Conference; 1st Place California State Champion
- ▶ State Semifinalist, Impromptu Speech (Speech & Debate)

RELEVANT SKILLS

Customer & Business Development: Client Relationship Management, Requirements Gathering, Technical Demos & Presentations, Cross-Functional Communication, Customer Retention Strategy

Hardware & Test Systems: Signal Processing, Ultrasonic Sensor Systems, Hardware-Software Integration, Regression & Validation Testing

Languages: Python, TypeScript, JavaScript, C++, SQL

Systems & Backend: Distributed Systems, REST APIs, Flask, Google Cloud Platform, Firebase, OAuth, CI/CD, System Architecture

AI / ML: Model Training & Fine-tuning (RLHF, DPO), Vector Embeddings, Semantic Search, ML Pipelines

Frontend & Mobile: React, React Native, TypeScript

PROFESSIONAL EXPERIENCE

Azetta AI — Cosma · San Francisco, CA

Advisor

Jul 2026 – Present

Co-Founder & Lead Engineer

Oct 2025 – Jul 2026

Vector Database Research · Applied ML · Embedding Systems (Prototype Stage)

- ▶ Built GUI demo tooling to communicate complex quantization-based model compression research to both technical and non-technical stakeholders
- ▶ Conducted R&D on quantization-based model compression methods, translating technical tradeoffs into practical, explainable engineering decisions
- ▶ Owned DevOps for the team's transformer engine (training/inference infrastructure)
- ▶ Collaborated on research advised by Krzysztof Choromanski (Columbia University / Google DeepMind); published as "SLAY: Geometry-Aware Spherical Linearized Attention with Yat-Kernel" (arXiv:2602.04915)

Lead Founding Engineer | Workflow · Los Angeles, CA

Mar 2025 – Oct 2025

Seed-backed by Slauson & Co · PostgreSQL · React · TypeScript · Supabase · Prisma ORM · AI Integration

- ▶ Worked directly with 100+ business clients within 7 months of launch to gather requirements and translate customer pain points into shipped product features, contributing to \$100K in annual gross transaction volume
- ▶ Presented technical architecture and product roadmap directly to clients and stakeholders to build trust and drive adoption

- ▶ Architected backend achieving sub-100ms query latency (5× improvement) to support responsive, customer-facing real-time workflows
- ▶ Integrated LLM-based inference features directly requested by customers, balancing technical constraints (latency, cost) with client expectations

Co-Founder & Lead Engineer | Popper LLC · San Francisco, CA

Dec 2022 – Mar 2025

React Native · Cloud Firestore · Google Cloud Platform · REST APIs · NoSQL

- ▶ Personally led customer acquisition and relationship management, scaling from 0 to 60+ business clients through consultative, needs-based conversations and retention-focused product design, achieving <5% monthly churn
- ▶ Coordinated a cross-functional team of 8, regularly presenting technical direction and product decisions to stakeholders; shipped 4 major product versions over 2 years
- ▶ Built and demoed a production React Native application sustaining 20,000+ daily operations with real-time sync, directly addressing customer reliability concerns
- ▶ Scaled unit-economically profitable operations to 3,300+ MAU and \$70K+ gross transactions by continuously identifying and resolving customer pain points

Software Engineer Intern | TDK Electronics (Chirp Microsystems) · Berkeley, CA

Jun 2019 – Aug 2019

Python · C++ · Ultrasonic Sensor Systems · Signal Processing

- ▶ Analyzed multi-dimensional ultrasonic sensor data for 3D spatial positioning accuracy, producing signal-processing visualizations used in product marketing and customer-facing engineering review
- ▶ Developed a Python automation framework for ultrasonic sensor data analysis and regression testing, reducing manual testing cycle time by 60%
- ▶ Wrapped C++ hardware interface libraries in developer-friendly Python bindings to accelerate prototype iteration for the hardware team

CUSTOMER & TECHNICAL HIGHLIGHTS

- ▶ Grew combined client base to 160+ business customers across two founder-led ventures, sustaining sub-5% monthly churn through direct, ongoing customer relationships
- ▶ Hands-on hardware test background in ultrasonic sensor systems — signal processing, regression testing, and hardware-software integration directly relevant to Keysight's measurement domain
- ▶ Built GUI demo tooling to translate complex technical research (model compression, transformer systems) into clear, actionable presentations for varied audiences
- ▶ Regularly presented technical architecture and roadmap decisions directly to clients and a cross-functional team of 8
- ▶ Reduced customer-facing system latency 5× (500ms → sub-100ms) to improve real-time product experience
